

Please read **ALL** instructions carefully **BEFORE** use.

Using Super Silver™ is as easy as 1 – 2 – 3!

1. Place Super Silver™ plate in container or sink.
2. Add baking soda (1-2 tablespoons per liter of water).
3. Place items in container, in direct contact with Super Silver™ plate and add **VERY HOT / BOILING** water to completely cover your items.

The combination of baking soda, **VERY HOT / BOILING** water and the Super Silver™ plate will cause an electrolytic reaction that will **SAFELY** draw the tarnish and dirt away from your silver, sterling silver, silver plate, gold, copper or platinum. Within seconds, you will see the tarnish disappear!

Depending on the type of metal and the number of items on the plate, the cleaning time may vary. Ensure all items are in **DIRECT** contact with the Super Silver™ plate and that they are completely submerged under the water. Depending on the amount of dirt and level of tarnish, some items may require multiple cleanings. (Sterling silver may require up to 30 minutes.)

Do not clean silver and other metals at the same time.

Do not use on brass, bronze, lacquered, enameled or varnished items.

CAUTION: Because VERY HOT / BOILING water will render the most effective cleaning results, we recommend you wear rubber gloves and use extreme caution to avoid potential skin burn or injury.

Caring for your Super Silver™ plate: Taking proper care of your Super Silver™ plate will ensure that it will last **FOREVER!**

Clean your Super Silver™ plate after each use: Pour white vinegar on plate and scrub with non-abrasive scouring pad. Rinse with cool water and store in dry place away from moisture or direct heat.
